

REDEFINING POSSIBLE

AI & Software Services · London · peaqok.ai

From AI prototype to production-grade.

More businesses than ever are building their own tools with AI, whether they're refining an existing prototype or starting from a blank page. Peaqok takes it the distance: reliable, secure, and built to scale.

Backed by an international team of experienced engineers across Switzerland and Romania.

SERVICES · ONE FOCUS: AI, FROM FIRST PROTOTYPE TO PRODUCTION

MVPs & prototypes

Starting from a blank page: a first working AI product you can test with real users, on foundations that can carry it further.

Cost at scale

Keeping AI model and agent costs sensible as usage grows, so success doesn't arrive with a runaway bill.

Productionisation

Turning AI prototypes and AI-built tools into systems that are tested, calibrated and reliable under real use.

Governance & security

Putting the right controls around your AI, so the business can trust what it produces.

RECENT WORK

How Peaqok freed **Recoveris** from manual casework.

THE CHALLENGE

Recoveris is a blockchain-forensics company based in Zug, Switzerland, investigating crypto theft and fraud. Their skilled investigators were spending significant time on repetitive onboarding and case-prep work.

WHAT WE BUILT

Peaqok built AI onboarding agents that automate that manual groundwork, and supported Recoveris on strategic partnerships work.

THE OUTCOME

Investigators now spend their time on cases, not process.

How Peaqok built a digital twin with **Aleph News**.

THE CHALLENGE

Aleph News is a Romanian news broadcaster. Its owner, a veteran media executive, carries decades of institutional knowledge that lives only in his own memory and the people around him.

WHAT WE BUILT

Peaqok built a personal AI digital twin, trained on proprietary and public data about him and the people in his orbit, shared with consent under strict data processing agreements. It works as a living memory he can think alongside, surfacing context and decisions he'd otherwise have forgotten.

THE OUTCOME

A career's worth of knowledge, his own and that of the people who shaped it, preserved as a lasting legacy that can still be questioned, built on, and brainstormed with.

WHY PEAQOK

- 01 Founder-led: she built and ran her own successful company before this one.
- 02 Editorial leadership: ran the editorial operation of a national newspaper, print and online.
- 03 Governance from the inside: volunteer auditor experience, not policy read from a book.
- 04 Cross-sector delivery across retail leadership, NHS finance, and technical project, programme and product management.
- 05 Backed by an international team of experienced engineers across Switzerland and Romania.

Have an idea, or a prototype ready for more?
